

Dr. Philip Nicholson's

VISUAL LEARNING CENTER

Fun, age-appropriate activities that you can do at home with your child:

To improve convergence and the ability to do close work:

- 1.** Provide craft projects that challenge and motivate your child. You can find many ideas at the website www.enchantedlearning.com/crafts/
- 2.** Play marbles, jacks, and other eye hand skill games.

To improve pursuit fixation, or the ability of the eyes to track and maintain attention on stable and moving objects:

- 1.** Play “I spy” or other visual games, like finding as many out of state license plates as you can, etc, while traveling in the car.

To improve saccadic vision {the ability of the eyes to jump and fix, the skill required for reading}

- 1.** Lacing, beading, coloring, and cutting activities.
- 2.** If your child enjoys drawing or painting, have him/her do so while standing at an easel.
- 3.** Weaving and sewing activities.

To improve visual discrimination:

1. Put together jigsaw puzzles, play Search a Word, and “Where’s Waldo?”
2. Have your child help you tidy up around the house and practice her sorting skills at the same time by sorting silverware and socks!
3. Both nesting and stacking toys promote pattern recognition - which is critical for learning shapes of letters.
